Industry Insight

Migrating BI and analytics platforms to the cloud offers tremendous upside, providing greater flexibility and scalability, particularly for organizations seeking to offer more self-service capabilities to their citizen data scientists. However, the process of transitioning BI from legacy on-premises systems to the cloud isn't always as simple as it may seem.

Companies must plan their migration paths carefully, otherwise be prepared to face unexpected challenges such as higher than expected costs related to migration, dual environments, overlapping functionality, further data proliferation, security complexity between on-prem and cloud services, and a multi cloud vendor overlap.

Our Approach

truData Solutions leading practices help our clients to plan effectively, ensuring a successful Cloud & Data & Analytics migration. Our experienced team addresses areas that include vendor & services assessment, migration strategy and approach, subscription models, integration, data privacy, and governance.

truData's iterative, end-to-end approach starts with the identification of aligning business objectives with technology objectives, where cloud vendor capabilities and services are aligned with software/application vendors roadmaps. Through our experienced group of recognized enterprise technology professionals, supported by an energized data management and data science team, truData partners with clients to maximize the opportunities cloud services offer.

Deliverables

Typically truData's Strategy and Roadmap engagement is a four to six week effort, culminating in a presentation to Stakeholder's detailing the following;

- Key business and IT objectives for Cloud Analytics over the next 3-5 years
- Assessment of current BI & Data solutions against leading services available
- Review of business analytical capabilities to date and request for further analytical maturity
- Alignment of the Business and Technology objectives and preferred cloud vendor solutions and services (such as AWS, Azure and Google Cloud) for the user type and reporting characteristic (descriptive vs discovery)
- Alignment of analytical capabilities and output to operational automation, insight to automated action
- Proposed roadmap – migration scope and approach, timeline, project cost and resource plan.
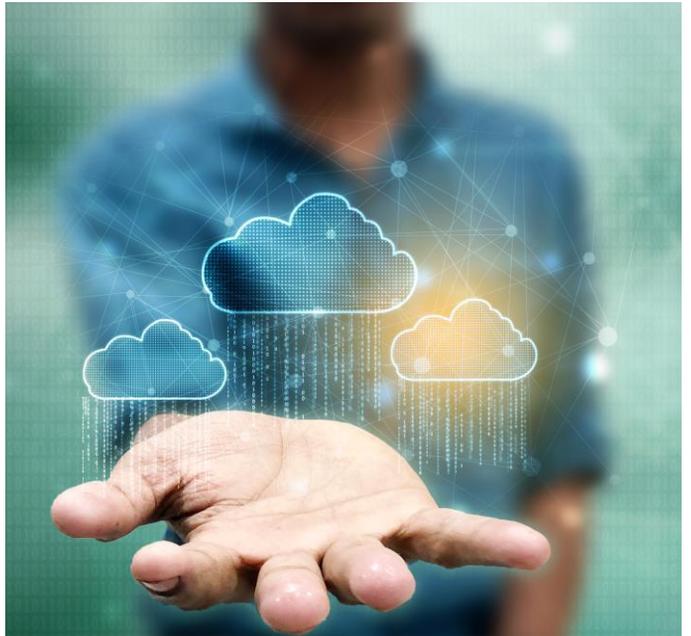

About Us

Headquartered in San Diego, CA **truData Solutions** is a technology services provider with extensive Leading Practices across S/4HANA, Cloud Transformation and Data and Analytics. We partner with mid -size to Fortune 10 clients, in their Digital Transformation journey, ensuring improved consumer insight, reduced complexity whilst increasing revenues, and streamlined processes. Our Service Portfolio includes;

- Strategy and Roadmap
- Full Lifecycle Implementation
- Application Managed Services
- Strategic Placement

aws

Azure

Google

SAP® Analytics Cloud
